## Problem Statement: Car Pooling Application

Carpooling is a smart way to commute by sharing just one vehicle. A car owner, offers ride and chooses fellow riders who travel along the same route.

#### **Tech Stack:**

- Frontend Part :
  - o HTML
  - o CSS
  - Bootstrap
  - Javascript
- Backend Part:
  - Core Java 11
  - Java Spring Framework
- Database:
  - MYSQL

#### **Tools Used:**

- Frontend Part :
  - VS code
- Backend Part:
  - Intellij Code editor
- Database:
  - DBeaver

#### **Scope Of Project:**

- Login and Register for users.
- Searching for rides (not using other geolocation apis)
- Giving locations and start the ride (static locations not geolocation)
- Create/Update/Delete features on user's dashboard

## **Project Components**

Login / Register

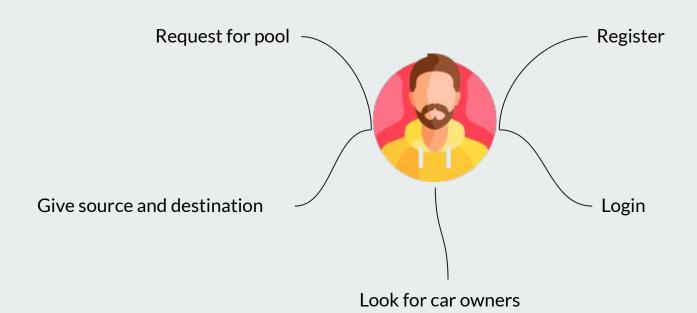

**Booking** 

### **Owner**

#### **Pooler**

## Login

User name and password Required for login

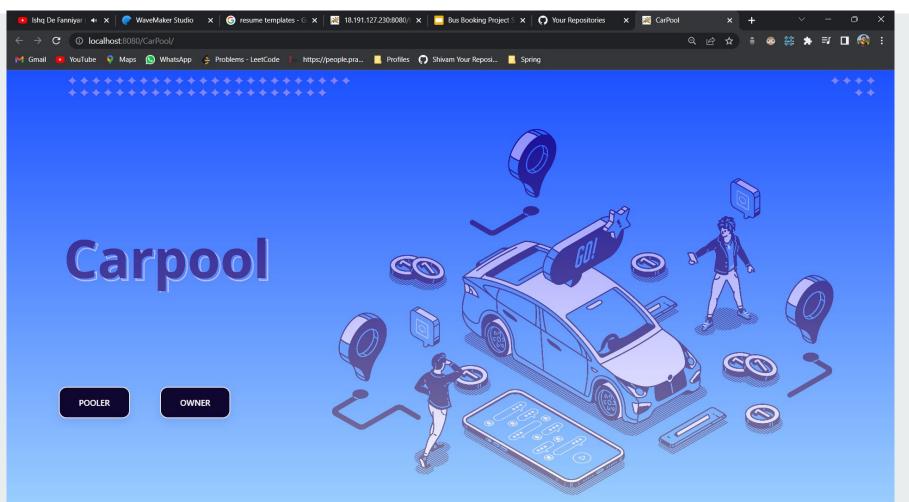

## **Booking**

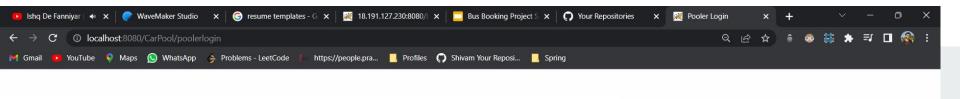

Date of booking

BOOKING Pooler

Source and Destination of both pooler and car owner

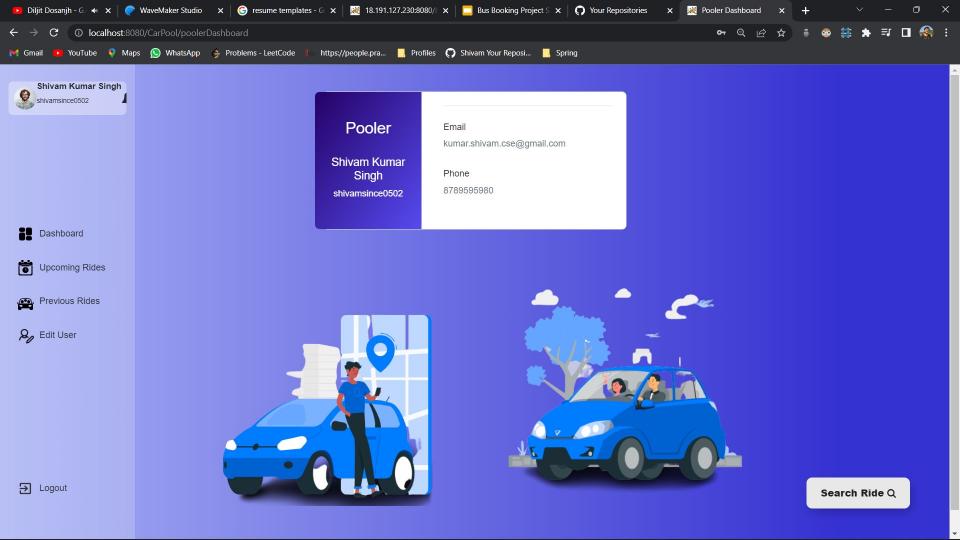

#### Screen Shots of application
